# Stay Secure with March Networks Advanced Certificate Management

Protect access to your network, ensure compliance, and guarantee trusted and confidential communication that shields you from malicious attackers. Advanced certificate management provides automatic renewal of certificates, significantly reducing the need for manual updates and minimizing downtime, keeping your organization secure and saving time and money.

Before

Tired of spending time and money on managing your certificates one by one?

After

Secure your system with one click.

With **March Networks Advanced Certificate Management**, you can streamline your process for issuing, renewing, and deploying certificates on your recorders, saving you time and money, and ensuring continuous operation and robust security.

This solution is particularly beneficial for financial institutions where security and data protection are paramount. March Networks Command Enterprise Software (CES) automates certificate management with a centralized platform, simplifying notifications and renewals from a single interface.

Key Benefits

Enhanced Security: Generating and distributing HTTPS X.509 and 802.1 certificates from a configurable certification authority, CES ensures robust identity management and secure network access, protecting against unauthorized devices.

Automatic Renewal: Certificates are automatically renewed before expiration, preventing service interruptions and reducing manual workload.

Centralized Management: A single, secure platform offers easy notifications and management of certificate renewals and deployments, improving efficiency and oversight.

Compliance Assurance: The automated system helps maintain compliance with security standards and regulations, reducing the risk of fines and penalties.

Reduced Downtime: By streamlining the process of certificate management, CES minimizes downtime associated with manual certificate renewals and updates.

Why is certificate management important?

Certificate management protects your network and devices from unauthorized access and reduces the manual burden on your IT staff.
