

Streamline Video Integration with March Networks DevAPI

The March Networks DevAPI provides a powerful solution for seamless video streaming integration across internal and third-party platforms. With this API, you can embed the CES Web Client Video Player into any web application, delivering a unified and consistent video streaming experience. DevAPI empowers businesses to create more connected, efficient solutions tailored to their specific needs.

Key Benefits

Seamless Integration

Enable third-party products, such as in-store monitors or custom dashboards, to integrate directly with the March Networks video player.

Simplified Workflow

Embed the CES Web Client Video Player into internal or third-party applications for easy video access and playback.

Customizable Solutions

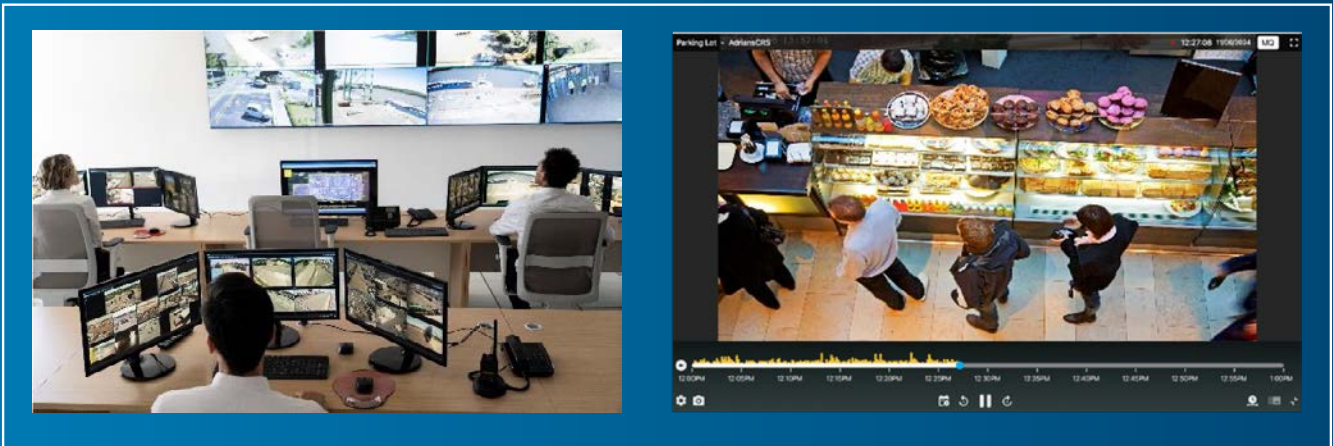

Empower development partners to create tailored, efficient integrations that meet their unique business requirements.

Use Cases

In-Store Monitors: Integrate live video streams directly into retail displays to monitor activity and enhance store operations.

Access Control: Integrate March Networks video with an Access Control system to seamlessly view and verify video footage when access events occur.

Remote Video Monitoring: Enable remote video monitoring and alarm verification by pulling March Networks video into alarm monitoring software for real-time event assessment.

Why Choose March Networks DevAPI?

March Networks DevAPI provides a robust integration ecosystem supported by our development partner program. This solution simplifies integration, enhances video access, and allows partners to create efficient and customized tools that maximize their investment in video technology.
